EDUCATION

Gati Shakti Vishwavidyalaya (GSV)
B.Tech in Artificial Intelligence & Data Science

Vadodara, Gujarat
Aug. 2024 – May 2028

EXPERIENCE

Software Development Intern

May 2025 – June 2025

Airports Authority of India (AAI) – LBS International Airport

Varanasi, UP

- Building a publicly accessible crowd and resource load forecasting system using XGBoost for real-time airport operational insights
- Developing a full-stack platform with React/Tailwind frontend and FastAPI backend integrated with PostgreSQL
- Designing RESTful APIs and ML inference pipeline for live prediction serving to internal airport staff

Software Development Intern

May 2024 – July 2024

Divisional Railway Manager (DRM) Office – Indian Railways

Vadodara, Gujarat

- Developed an Automated Parking System using OpenCV and Tesseract OCR for real-time vehicle number plate detection
- Built a full-stack web interface for parking management with live camera feed integration
- Reduced manual entry effort by automating license plate recognition with 90%+ detection accuracy

PROJECTS

Trenetra | *PyTorch, OpenCV, SAM, DINOv2, FastAPI, Docker, Redis, PostgreSQL*

2025

- Built a real-time video analytics pipeline for persistent scene change detection, submitted to NCVPRIPG'26
- Integrated SAM + DINOv2 for zero-shot segmentation and feature extraction achieving state-of-the-art detection
- Deployed end-to-end with FastAPI backend, Docker containerization, and Redis-based task queuing
- Developed under PSCDL 2026 competition in collaboration with Vehant Technologies

SupplyLens | *FastAPI, React, TypeScript, MySQL, Clerk, Vercel*

2025

- Built a supplier analytics platform with ML-driven performance scoring deployed live at supply-lens.vercel.app
- Implemented full-stack architecture with React/TypeScript frontend, FastAPI backend, and Clerk authentication
- Designed supplier risk scoring pipeline processing On-Time Delivery, Fill Rate, and Quality Rate metrics

SmartPark OS | *YOLOv8, EasyOCR, FastAPI, React, TypeScript, Redis, Docker*

2025

- Developed a smart parking platform with real-time vehicle detection using YOLOv8 and license plate recognition via EasyOCR
- Built microservice architecture with Docker Compose, Redis caching, and FastAPI REST endpoints
- Designed React/TypeScript dashboard for live slot occupancy monitoring and entry/exit management

MHDS – Multimodal Harm Detection System | *PyTorch, BERT, FastAPI, Docker*

2024

- Engineered a multimodal harm detection pipeline supporting text, audio, and video input modalities
- Implemented BERT-based text classifier fused with audio (Librosa) and video (OpenCV) feature extractors
- Containerized full inference pipeline with Docker and exposed via FastAPI for scalable deployment

CERTIFICATIONS

AI in Everyday Life | *NVIDIA Deep Learning Institute*

2024

Deep Learning Specialization | *[Course Provider – e.g. Coursera/DeepLearning.AI]*

2024

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, C/C++, HTML/CSS

AI/ML: PyTorch, OpenCV, YOLOv8, SAM, DINOv2, BERT, HuggingFace, XGBoost, scikit-learn, Librosa

Frameworks: FastAPI, React, Node.js, Tailwind CSS, Flask

Developer Tools: Docker, Redis, Git, GitHub Actions, VS Code, Postman

Databases: PostgreSQL, MySQL, Redis

Platforms: Vercel, Linux, Google Cloud Platform
